

## Requirements

### Functional:

Inventory System- The website has to be able to show all the clothes we have available in our inventory to get purchased.

Cart System- Has to be a shopping cart system on the website which allows customers to add clothes that they want to a virtual cart.

Pay System- Gotta have a way for people to pay for the clothes they wish to purchase from our brand.

Account System- The website has to be able to store customer information like payment information or prior purchases.

Sharing System- Has to be able to share products on the website they like

Review System- Has to be a way to review and comment on products they purchased in the past

Shipping System- Has to be able to track the location of a package once a purchase has been made.

### Non-Functional:

Has to look appealing to the eyes of potential customers.

Has to be accessible and not confusing

Our products have to stand out on the website

Account Information has to be secure

### Constraints:

Time –Only about a month and a few days to finish this project.

Resources – I'm the only person working on this but the price for the website itself is pretty cheap.
