System Test Procedure

Testing the Website

Step 1.

Basic check of the website to make sure that it's running properly and all pages can be accessed.

Step 2

Test each requirement

Inventory System Requirement - Go to the Store screen and see if you can view and access all clothing items that are on the store screen to test the Inventory System Requirement.

Step 3

Cart System Requirement - Attempt to add clothing items to the cart on the website then check the website to see if the website saved your clothing items into the cart.

Step 4

Pay System Requirement - Attempt to check out with clothes in the cart to see if the payment system lets you put into payment information in and lets you check out.

Step 5

Shipping System Requirement- See if you can put in a shipping number and it lets you know where a package is and how far it is from your house.

Step 6

Sharing System Requirement - Attempt to use the social media feature on the website to share a clothing item.

Step 7

Review System Requirement - Finally on a clothing item page, scroll down and see if you can leave a review on a clothing item and see if it stays.
